the bible is a collection of sixty six books written by many different people over many hundreds of years all of its writers lived in an ancient world context and thought in ancient world ways but as bible readers today we live and think in the modern world which is increasingly a postmodern world things that were obvious to them are not obvious to us and vice versa for christians who want to be faithful to the bible as the word of god the time and distance between then and now is a real challenge to navigate stephen burnhope suggests that we won't get it right by collapsing that gap by just picking the text up and reading it the bible says insert a verse is not enough we will mishear both what the human authors were saying and what the divine author was saying reading the bible well starts from reading it with its writers understanding it as they understood it what they were saying why they said it and how they said it all of which is shaped and framed by the bible's big themes that once we're aware of them we see running throughout from cover to cover

scripts writing systems usually belong to specific languages and have temporal spatial and cultural characteristics the evolution of scripts has been the subject of research for a long time this is probably because the long term development of human thinking is reflected in the surviving script relics many of which are still undeciphered today the book presents the study of the script evolution with the mathematical tools of systematics phylogenetics and bioinformatics in the research described the script is the evolutionary taxonomic unit taxon which is analogous to the concept of biological species among the methods of phylogenetics phenetics classifies the investigated taxa on the basis of their morphological similarity and does not primarily examine genealogical relationships due to the scarcity of morphological diversity of scripts features random coincidences of evolution independent features are much more common in scripts than in biological species thus phenetic modelling based solely on morphological features can lead to erroneous results for this reason phenetic modeling has been extended with evolutionary considerations thereby allowing the modelling uncertainties observed in the script evolution to be addressed due to the large number of random coincidences homoplasies characterizing each script the book describes an extended phenetic method developed to investigate the script evolution this data driven approach helps to reduce the impact of the uncertainties inherent in the phenetic model due to the large number of homoplasies that occur during the evolution of scripts the elaborated phenetic and evolutionary analyses were applied to the rovash scripts used on the eurasian steppe grassland including the turkic rovash turkic runic runiform and the székely hungarian rovash the evaluation of the extended phenetic model of the scripts the various phenograms the script spectra and the group spectra helped to reconstruct the main ancestors and evolutionary

stages of the investigated scripts
