when designing electronic circuits creating a product that meets the needs of the consumer and conforms to the requirements of production are essential parts of the electronic engineer s range of skills undergraduate students must acquire these skills through project work and they require a textbook that provides the basic approaches and techniques needed for these design projects electronic product design supplies a complete practical treatment of this core subject by integrating several aspects of product development that are usually found in separate texts it examines design goals approaches for system design costs of product development designing for reliability and quality analysis the authors convey the principles by using examples of common electronic products providing summaries of key concepts and concluding with review problems covering the topic from the perspective of the electronic designer the text clearly explains how electronic functionality is implemented in a broad range of products it is a valuable resource for undergraduate

statistical software testing is a promising technique for reducing the software testing burden by applying test cases to the software under test according to a model of the expected usage of the system in operation called an operational profile however current statistical testing techniques have not been put into general practice as they do not scale well as the complexity of the systems under test increases in particular as system complexity increases the matrices required to generate test cases and perform model analysis can grow dramatically even exponentially overwhelming the test generation and analysis applications in this work a new technique for representing the operational profile is proposed to mitigate the complexity issue for statistical test case generation the use of a state based requirements specification model as the basis of the operational profile leverages parallelism

to reduce the visible size of the model the specification model can then be extended to include conditional probabilities of input data occurrence this work also proposes a statistical testing framework using this specification based operational profile to generate and execute test cases such a framework allows us to evaluate the effectiveness and efficiency of this statistical testing technique
